You cannot delete the only client secret.
Generate a new client secret first.

Basic information

GitHub App name *

Backstage-Local-GitHub-Integration

The name of your GitHub App.

| Write | Preview | Markdown supported

GitHub App for Backstage

Homepage URL *

    http://localhost:3000/

The full URL to your GitHub App's website.

Identifying and authorizing users   **Add Callback URL**

The full URL to redirect to after a user authorizes an installation.

Callback URL

    http://localhost:7007/api/auth/github/handler/frame   **Delete**

☐ **Request user authorization (OAuth) during installation**

Requests that the installing user grants access to their identity during installation of your App

Read our Identifying and authorizing users for GitHub Apps documentation for more information.

☐ **Enable Device Flow**

Allow this GitHub App to authorize users via the Device Flow.

Read the Device Flow documentation for more information.

Post installation

Setup URL (optional)

Users will be redirected to this URL after installing your GitHub App to complete additional setup.

☐ **Redirect on update**

Redirect users to the 'Setup URL' after installations are updated (E.g. repositories added/removed).

Webhook

☐ **Active**

We will deliver event details when this hook is triggered.

Webhook URL

    https://smee.io/AZDGpPvapZr8jV9cB2x

Events will POST to this URL. Read our **webhook documentation** for more information.

Webhook secret (optional)

> If you've lost or forgotten this secret, you can change it, but be aware that any integrations using this secret will need to be updated. — **Change Secret**

Read our **webhook secret documentation** for more information.

SSL verification

🔒 By default, we verify SSL certificates when delivering payloads.

🔘 **Enable SSL verification**   ⚪ **Disable** (not recommended)

[Save changes]   Cancel
